ABRI's ILR Support team have reported an increase in interest from breed societies wanting to consolidate the management of their financials into dedicated external accounting platforms such as MYOB and Xero.

Many breed societies use the ILR2 debtor's module to capture billable transactions and payments and use these to create invoices, statements, and other financial reports within ILR2.

ABRI recognises that providing accounting software is not our core business and we have therefore created a process to integrate your ILR2 system's transactions with your preferred external accounting platform.

DID YOU KNOW:

ILR2 transactions can be exported to your breed society's external accounting system

ILR2 membership details can also be exported to your external accounting system rather than having to update those details in both platforms

ILR2 can continue to create your breed society's billable registry transactions, but you can manage all payments, invoicing, statements, and other accounting functions exclusively in your external accounting software
